Lync Mobile Application

Summary: this document will walk you through how to get the Lync Mobile app, and how to sign into it.

The Microsoft Lync client for Mobile clients is available for iPhones & iPads on the iTunes market, and it is available on the Android marketplace too. To download & install it, search your appropriate mobile application marketplace for the “Microsoft Lync 2010” application. Then install it as you would any other application for your mobile device.

Once you have installed it, start up the application to run it.

On the sign in screen, enter in your email address, and then click on the “More Details” section.
You will need to enter in your email address, password, and then under "more details", you will need to enter in your username in ODUNET\username format for this to work. For example, since my email address is asmith@odu.edu and my username is asmith, I had to enter in my username as: odunet\asmith

The rest of the settings can be left as the defaults. Leave “Auto-Detect Server” set to On. You do not need to configure an HTTP proxy.
The first time you sign in, you will need to enter in your phone number. We do not currently have phone integration with Lync & our Cisco phone system configured, so phone calls will not work through Lync, but you can still use the Lync “click to call” feature to use your cell phone to call phone #’s listed within Lync.

Once you are signed in, you will be able to set your availability, a status message, and other options from the “My Info” tab.

From the Contacts tab, you can view your contact list, look up people from the ODU address book, and initiate instant messaging sessions with them.
